I think it would be a cool idea if you go to a location and you can't immediately access the location. For example, it could be that a gate is closed and you have to try and find another way into the city. I also think it would be a great idea that maybe you might have to find a key to open up the gate.

I think that'd be very cool and maybe a few different characters can use their abilities to get past certain obstacles. For example, maybe the mage has blaze and they're able to destroy a tree that's in the way, or that a character that has the water ability is able to swim in the sea. I think that there also should be a lot more different moves and power moves that can be learnt, passed on, inherited by different characters.

The move set is very limited and there's not that much there to begin with. Add more powers, add more skills, add more proficiencies. I think that characters can get better at a weapon if they use it more or they use an ability more.

I think there should be a skill tree that you're able to access and have a look at, almost like Skyrim or any games that have a skill tree related system. You'd be able to level up, maybe choose a path or maybe get the character to choose its own path and really give that character the sense of intelligence.
